DETAILED ACTION

Drawings

Figures 3 and 4 are objected to because the numerals 10 and 20 used to depict the inner and outer core do not agree with the specification and those used in figure 1. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

A person shall be entitled to a patent unless –(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 and 2 are rejected under 35 U.S.C. 102(a) as being anticipated by Lee et al., US 6077054. Lee et al. show a reciprocating motor in figure 3, having a frame comprising cylinder block 53 and an unlabeled annular stainless-steel (cross-hatched) ring lying between cylinder block 53 and back iron 60. Inner core (back iron 60) is fixed to the stainless steel ring. Also note that outer core 100 is fixed by cylinder block 53.

Re claim 2, note that stainless steel is non-magnetic.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Benson, US 4454426. Benson shows a stator fastening structure of a reciprocating motor in figure 3. Note the frame formed by plastic section 43 (attached to outer core 57b) and tie bolt 52 formed of magnetic material. Tie bolt 52 is attached to and supporting inner core 48b.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Song et al. in figure 6 shows a frame comprising cylindrical cylinder 4 and cover plate 3. Vitale teaches use of non-magnetic material to achieve high efficiency.
